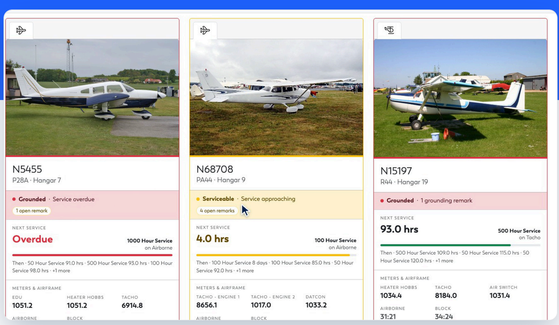
OY WINGS 1.111

From first snag to release to service, on the record.

A rebuilt maintenance workflow, five new compliance reports and safety reporting ready for the authority.

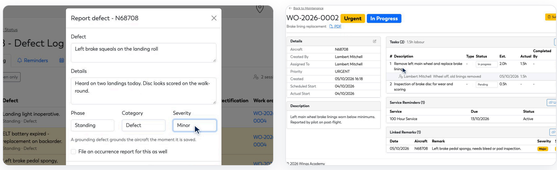


11/10/26. Oscar Yankee today released OY Wings 1.111 for flight schools, flying clubs and operators. Every defect now has a clear path from the crew who reports it to the signature that releases the aircraft, and the figures an audit asks for are one click away.

01 · MAINTENANCE

Every defect, from report to release.

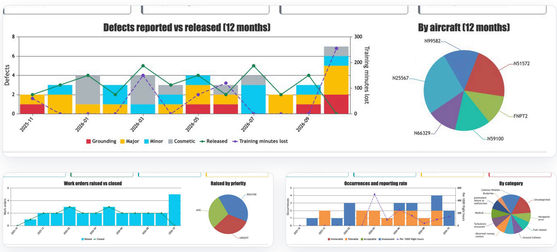
Crews answer the defects question after every flight. Deferrals carry their MEL limits and restrictions, and work orders lock for sign-off.



02 · COMPLIANCE REPORTS

The figures an audit asks for.

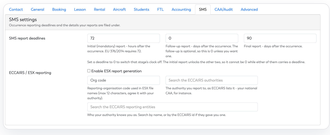
Defect trends, maintenance activity, occurrence trends and more, twelve months at a glance.



03 · SAFETY

Ready for the authority.

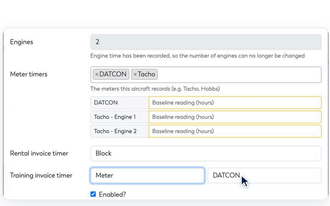
Set your own EU 376/2014 deadlines, record each submission and generate E5X files for ECCAIRS.

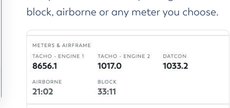


04 · METERS AND BILLING

Meters that match the aircraft.

Every meter, read once per engine. Bill on block, airborne or any meter you choose.

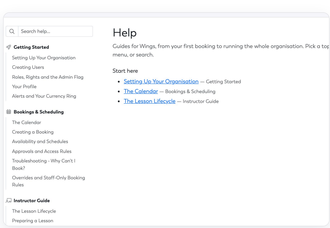




05 · HELP CENTRE

Help, built in.

52 guides written for each role, one click from every page.



ALSO IN 1.111

- Redesigned aircraft cards
- Tech-log style aircraft log
- Open defects shown to the next crew
- Service reminders on any meter

Available now

Included for every OY Wings customer. Maintenance management and E5X export are switched on in organisation settings.
